

Support SOP – Entity to Calling Enablement

Purpose

This document explains the standard operating procedure (SOP) for support and backend teams to onboard an entity and enable calling functionality using a third-party calling system.

Scope

This SOP is applicable to all entities that require IVR-based calling integration through manual third-party registration.

Roles Involved

- 1 Support Team – Handles verification, third-party registration, and IVR assignment
- 2 Backend Team – Maintains APIs, mappings, and call logs
- 3 Third-Party Calling Provider – Provides IVR, agents, and calling APIs

Step-by-Step SOP

- 1 Receive notification when a new entity is created in the system.
- 2 Open entity details and verify required documents.
- 3 If documents are missing, contact the client and collect them.
- 4 Login to the third-party calling provider panel.
- 5 Manually register the entity and upload documents.
- 6 Wait for entity approval from the third-party system.
- 7 Generate API key for the entity after approval.
- 8 Update the API key in the CRM admin panel.
- 9 Assign IVR number to the entity.
- 10 Verify IVR status is active.
- 11 Create agent if required and link it to the IVR.
- 12 Perform a test call to validate setup.
- 13 If test call fails, debug or escalate the issue.
- 14 If test call is successful, mark entity as CALLING READY.

Completion Criteria

- 1 API key configured
- 2 IVR assigned and active
- 3 Agent linked successfully
- 4 Test call completed successfully
- 5 Entity marked as CALLING READY

This SOP should be followed for every new entity to ensure consistent and error-free calling setup.
